

Revegetation:

A critical component in tackling land-use-driven climate change, community resilience, and sustainable financing from the experiences of wider Southern and Central Africa

Date // **4 Dec 2024**
Time // **12:30-14:00 AST**
Location // Blue Zone,
Restoration Pavilion

The event will focus on the transformative potential of revegetation in land restoration, particularly through innovative circularity principles and tailored techniques. By integrating these approaches, restoration efforts can yield more sustainable, holistic outcomes that balance environmental integrity with social equity. Drawing insights from Southern and Central Africa, the session will address how revegetation of degraded landscapes not only combats climate change but also strengthens community resilience. Additionally, the discussion will examine the financial obstacles faced by both mining and restoration companies in aligning with ecological restoration standards, underscoring the need for effective and economically viable restoration practices.
