Date // **5 Dec 2024**

Time // **16:30-18:00 AST**

Location // **Blue Zone,
Restoration Pavilion**

The restoration economy blends innovation and financial resources to heal ecosystems and uplift communities globally. This sector combines ecological restoration with economic benefits, such as job creation and biodiversity enhancement, while addressing climate change and bolstering vital ecosystem services. To maximize its impact, sustainable business models, public-private partnerships, long-term funding, community engagement, adaptive management, and supportive policies are essential. Overcoming challenges such as funding gaps, regulatory fragmentation, expertise shortages, and monitoring issues is crucial for aligning environmental and economic objectives, paving the way for a resilient and sustainable future.
